---

## Problem A (30 - 40 minutes)

### Instructions

Solve the problem below using c#. The solution must be a console application and all code need to be in one .cs file.

### Notes

Your code will be assessed on the following:

- Adherence to S.O.L.I.D design principles
- Object oriented programming skills
- Unit Tests

### Problem

Given a list of space separated words, reverse the order of the words. Each line of text contains  $L$  letters and  $W$  words. A line will only consist of letters and space characters. There will be exactly one space character between each pair of consecutive words.

### Input

The first line of input gives the number of cases,  $N$ .

$N$  test cases follow. For each test case there will a line of letters and space characters indicating a list of space separated words. Spaces will not appear at the start or end of a line.

### Output

For each test case, output one line containing "Case  $x$ : " followed by the list of words in reverse order.

### Limits

$$1 \leq L \leq 25$$

## Sample

### Input

```
3
this is a test
foobar
all your base
```

### Output

```
Case 1: test a is this
Case 2: foobar
Case 3: base your all
```

Good luck!
